

<b>Job title</b>	Android Developer
<b>Reports to</b>	Director of Engineering
<b>Location</b>	Bangkok, Thailand

#### Company Description

We are hiring experienced Android developers to work on-site in our Bangkok offices. We look for a certain set of qualities in our development staff since we interact directly with non-technical clients and keep a very rapid development pace. We keep our project teams small (2-6) and focus on constantly delivering value to our clients through fast iterations, rapid deployment and an agile mindset. We have a highly collaborative environment with no cubicles and no management hierarchy – just a focus on delivering the best code possible.

#### Duties and Responsibilities

- You are a Thai citizen
- You are a confident communicator in both Thai and English
- You are proactive about ideas and confident enough to speak up when you have an opinion
- You are able to give constructive criticism about the work of others and can receive it about yours
- You strive to be an expert with your toolset
- You tinker, hack and love to be challenged, in and out of your day job
- You enjoy regularly tackling new projects and systems
- You write tests to drive your design, not catch bugs
- You can transform technical concepts into something non-technical people will understand
- You have a solid understanding of Java and related technologies
- You have used and are familiar with Git and Github

#### Benefits

- Salary based on experience but generally higher than all other tech jobs in Bangkok
- Unlimited days off (yes really, we don't track vacation time!)
- All expenses paid when you speak at an event
- Sustainable pace: 35 hours work and 5 hours of 'hack time' per week
- Have the opportunity to work on our own products (yes we run several successful startups too!)
- Monday to Friday work week
- Full-size Pool Table / Arcade Machine / Xbox One / PS4
- Free lunch every Friday from any restaurant you like
- Macbook Air / Thunderbolt Display on every desk
- Free use of the company helicopter (Ok that last one was just to see if you are still reading:)

<b>Approved by:</b>	(on behalf of CEO)
