

Job title	Senior Node.js Developer
Reports to	CTO
Location	Bangkok, Thailand

Company Description

We are currently assisting one of the region's largest internet and eBusiness companies.

Job Purpose

The primary function of this role is to responsible for managing the interchange of data between the server and the users. Assuming the lead on this project, your primary focus will be the development of all server-side logic and definition of the central database. Ensuring high performance and responsiveness to requests from the front-end. Integrating the front-end elements built by your co-workers into the application.

Duties and Responsibilities

- Integration of user-facing elements developed by front-end developers with server side logic.
- Writing testable, and efficient code.
- Design and implementation of low-latency, high-availability, and performance applications.
- Implementation of security and data protection.
- Integration of data storage solutions..

Candidate Profile

- Excellent proficiency with JavaScript.
- Strong understanding of front-end technologies, such as HTML5, and CSS3
- Understanding accessibility and security compliance.
- User authentication and authorization between multiple systems, servers, and environments.
- Integration of multiple data sources and databases into one system.
- Understanding fundamental design principles behind a scalable application.
- Understanding differences between multiple delivery platforms, such as mobile vs. desktop, and optimizing output to match the specific platform.
- Creating database schemas that represent and support business processes.
- Implementing automated testing platforms and unit tests.
- Proficient understanding of code versioning tools, such as Git.
- Working with AWS, MS Azure or other cloud server platforms.
- Bachelor's Degree in Computer Science, or equivalent professional software development experience. At least 3 years experience with node.js, along with all common libraries.
