JB HIRED

Job title	IT Architect
Location	Bangkok, Thailand

Company description

Our client is looking for a number of experienced professionals to join its expanding IT architecture team.

Candidates for these senior positions should have significant experience in systems architecture and end to end solutions design across both business and technical aspects of IT applications, data and SOA integration.

Successful candidates will be core members of the architecture team aimed at ensuring IT solutions meet the organisation's goals, needs and objectives, and providing the framework and foundations for developers to follow.

Responsibilities

- Understanding and analyzing business needs and requirements, translating them into architectural blueprints, end to end solution designs and development frameworks.

- Communicating architecture, end to end solutions, advice, guidance and direction to the wider IT and business communities.

- Working with component designers and developers to maintain alignment architecture and end-to-end solution designs.

- Ensuring solutions and component design align with architecture, strategic direction, polices and principles.

- Contribute to the development of IT architecture, roadmaps, policies and principles.

- Assessing the impact of new projects and project changes.

- Mentoring and guiding IT and business communities on architecture and good practices.

Requirements

- Bachelor's degree or Master's degree in Computer Engineering, Computer Science, Information Technology, Management Information Systems or Accounting Information Systems or equivalent.

  Knowledge & Experiences

- Over five years' experience in IT architecture and/or solution designer and/or system integration implementer in IT large/complex projects.

- Working in telecommunications industry is desirable but not essential.

- Strong experience in translating business requirements into technological solutions and architecture.

- Broad technical understanding and experience in the areas of IS/IT, applications, services, SOA, EAI, hardware, databases, security and networks.

- Broad, enterprise-wide view of business and technology requirements with an appreciation for strategy, processes and governance.

- Good understanding of IT best practices, development methodologies, and development life cycle.

- Excellent analytical, problem solving, and problem identification skills with good verbal and written communication skills in English and Thai.

- Understanding of information processing principles and practices.

- Good knowledge of applicable data privacy, security management practices and laws would be plus.

- Experience in business process management systems would be advantageous

- Experience in capacity planning would be advantageous

    Soft Skills Requirements

- Passionate about technology, with a "can-do" attitude and eager to learn new things.

- Able to work in flexible and dynamic environment.

- Able to work both independently and as part of a team.

- Work well under pressure or time constraints or in difficult situations and to take ownership of results.

- Good relationship building, interpersonal, communication, and persuasive skills,

- Able to create a collaborative environment and empower people by motivating, guiding, coaching, supporting and having trust in them.

- Strong sense of integrity and accountability.

- Strong leadership and consultative skills.

- Able to listen well and receptive.

- Able to effectively prioritise and execute tasks in a high-pressure environment.
